users and power
producers in the west*

KELLY FRANCONI Consultant

Ms. Francone joined Energy Strategies in March 2005. Her work involves coordination of legislative and regulatory support for Utah's largest consortium of industrial customers, the Utah Association of Energy Users (UAE). This work entails researching, analyzing and assessing the technical and financial aspects of various energy issues, as well as determining the impact of regulatory actions on customer rates.

She maintains the UAE web site to provide current and accurate information for industrial clients, as well as creating a weekly energy brief and monthly newsletter to keep clients abreast of energy-related news at both state and federal levels.

Ms. Francone coordinates and oversees one of the largest annual energy conferences in the Western United States, which brings together representatives from large industrial corporations, state regulation, the Legislature, utilities, and other energy-related businesses.

Ms. Francone performs specific research and analysis for senior staff members on both regulated and unregulated energy issues, including transmission projects, rate cases, demand-side management, energy efficiency, resource procurement, renewable energy, etc. She researches activities at the Western Electricity Coordination Council (WECC) as they relate to large energy users, energy producers and regulation in Utah.

She also tracks state and federal legislation to interact on behalf of industrial clients, as well as determining what impact such actions will have on energy rates.
